

ESOPHAGEAL STRING TEST

A minimally invasive procedure that allows your doctor to collect samples from your esophagus.

Why the String Test?

- Minimally Invasive - no sedation required!
- Swallow, Relax, Retrieve!
- Frequent evaluation of therapeutic response and effectiveness
- Frequent evaluation of food elimination protocols
- In-office testing, no hospital visit needed
- Cost savings compared to other testing methods.

Benefits for EoE Patients

The esophageal string test is particularly valuable for patients with Eosinophilic Esophagitis who may need multiple procedures to:

- Monitor disease activity
- Assess response to treatment
- Evaluate for food triggers
- Reduce the need for repeated endoscopies
